Exploring the Invisible Universe: Chandra X-ray Satellite Laboratory

Tuesday,
May 3, 2011
3:30 PM

**K-State Hale Library
Hemisphere Room**

Lecture on the Chandra
X-ray Telescope
for the General Public

In the early 21st century, astronomical observations have far exceeded our expectations. The observation of the Cosmic Microwave Background has provided strong credence to the Big Bang cosmology. The Chandra X-ray Satellite Laboratory is the newest telescope that opens a new window for exploring the universe and its mysteries. The talk will present a brief history of X-ray astronomy, the unique features of the Chandra X-ray telescope and some of its fascinating and remarkable pictures.
