

Public Observation

Join the Physics Department &
North Central Kansas Astronomical Society

Saturday, September 28

8:30 p.m.

Northeast Community Park

(Knox Lane on the east side of Manhattan)

Weather permitting

Go to www.nckas.org/events2013/ to check the status of the event as we will cancel if the weather doesn't cooperate.

Some of late summer's best are still out this time of year. The glorious Milky Way is clearly visible stretching from the northern sky to the southern horizon. Wonderful targets abound in this swath of our galaxies Cygnus arm. M11, 16, 17, 20, 24, 27, 51 to name a few will be on the agenda. Albireo in Cygnus is one of the most beautiful double stars in the entire sky. The Great Andromeda Galaxy, M31 and its companions are in prime viewing to the east and M31, the Pinwheel Galaxy, in Triangulum is right behind. Our Carbon Star of the month is V Aquilae.
