Hyperspherical Close Coupling Method: Recent applications to ion-atom and positron-atom collisions

ANH-THU LE, TECK LEE, MICHEL HESSE, Department of Physics, Cardwell Hall, Kansas State University, Manhattan, Kansas 66506, CHIEN-NAN LIU, Institute of Physics, National Chiao Tung University, Hsinchu 300, Taiwan, CHII-DONG LIN, Department of Physics, Cardwell Hall, Kansas State University, Manhattan, Kansas 66506 — Recently developed hyperspherical close coupling method is used to calculate charge-transfer cross sections for ion-atom and positron-atom collision processes in a wide range of collision energy. In our method the adiabatic channel functions are calculated with B-spline basis functions while the coupled hyperradial equations are solved by combination of R-matrix propagation and slow/smooth variable discretization method. The cross sections for some ion-atom and positron-atom collision systems are presented and compared with other theoretical and experimental results.
